# MechFiber 365+

## When details matter

Farming is changing and our diet feeders are evolving to help you drive increased productivity.

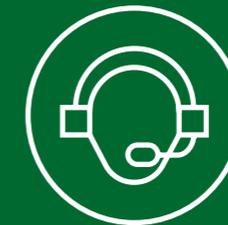

Every intricate detail has been fine-tuned and enhanced to take the unique MechFiber mix to the next level.

The new re-shaped paddle castellations enable even better movement of material in the mixing chamber. The profile and composition of the blades has increased efficiency, hardness and life-span. Together they deliver the unique MechFiber mix even faster and with less horsepower than before. A saving for you and the environment.

The new plus range includes a series of visual changes to the machine including high-end black graphite finished front covers and optional specially moulded durable black light pods. The pods sit over the feed-out door to enable a clearer view when ambient lighting is low. The rear lights are also housed in new pods to reduce the risk of damage. New specially cast mudguards also keep the machine clean and reduce risk of damage.

The new 4th generation Controller, feed management App and InTouch dashboard gives you full control of all farm data at the touch of a button, backed by 24/7 support.

Opt for the addition of telematic visuals on your Controller to ensure key performance metrics from machine sensors are easily viewed on the new HD screen including: information on machine operating temperature, oil levels, chain tensioning and feed-out door status. This will help ensure the trouble-free operation of your diet feeder.

VISIBLE  
IMPROVEMENTS

WITH  
INCREASED  
PRODUCTIVITY

Our unique MechFiber mix, coupled with the Alltech InTouch feed management platform provides the diet insights, consistency of mix and feeding accuracy, to improve the performance of your herd and meet your commitment to running a low carbon farm. The data gathered over the past 5 years from farms across the world using InTouch (new KEENAN users) resulted in the following:

**+11%** FEED  
EFFICIENCY

**+1.8** YIELD  
(kg)

**-2.0p/l** FEED  
COSTS

**+£243** PER  
COW

*based on standardised feed costs*

*based at 30p/l milk price*
